Reasons for Allowance

The following is an examiner's statement of reasons for allowance: applicant's amendments and arguments, filed March 29, 2004, are deemed to place the application in condition for allowance. In particular, the independent apparatus claims (Claims 1, 35, 39 and 43) have been amended to recite that the feedback apparatus is connected to the distal end of the patient cable. The term "connected" is deemed to establish a more positive recitation of the arrangement, whereas the term "coupled" may imply an indirect relationship. The feedback apparatus of Baker (i.e. the sensor) is part of the energy delivery device and is not directly connected to the patient cable (i.e. lead). See also applicant's arguments, page 9 of the March 29, 2004 response. With regard to the independent method claims, the prior art fails to specifically teach that the feedback signal is used to compensate for a power loss along the cable. In the previous rejection, the examiner was relying on the fact that the feedback signal would alter the output of the generator, and such an alteration may compensate for a power loss indirectly. The language now expressly states that the power loss along the patient cable is compensated by the feedback signal provided at the distal end of the cable to distinguish over the prior art of record.

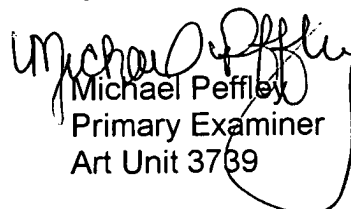

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
